	APPENDIX A – DUST MONITORING GRAPHS	17

1 INTRODUCTION

This report presents the results of dust monitoring conducted by Acoustic Logic for the Shoalhaven Hospital Redevelopment project site. Details presented in this report include monitoring locations, relevant project objectives, measured levels over the monitoring period and discussion of results.

This report presents the results of monitoring for the month of September between 1/9/2024 and 30/9/2024. Monitoring has been ongoing since 29th May 2023.

This report should be read in conjunction with the Construction Noise, Dust and Vibration Management Sub Plan prepared by this office (ref: 20230220.1/0506A/R1/VF, dated 05/06/2023)

2 SITE DESCRIPTION

The project site is located at Shoalhaven Hospital Redevelopment. Site works are now at the building construction stage.

2.1.1 Surrounding Receivers

Based on site investigations, the following developments surround the site:

Table 1 – Sensitive Receivers

Receiver (Refer Figure 1)	Receiver Type	Comment
R1	Residential	Detached dwellings to south of North Street, and residences and St Michaels Catholic Church and school to the east.
R2	Residential	Detached dwellings to north east, opposite Shoalhaven Street with some health and commercial and recreational uses.
PS	School	Shoalhaven Community Pre-School (future relocated site).
CC	Hospital	Cancer Centre overnight accommodation (part of the greater hospital site).

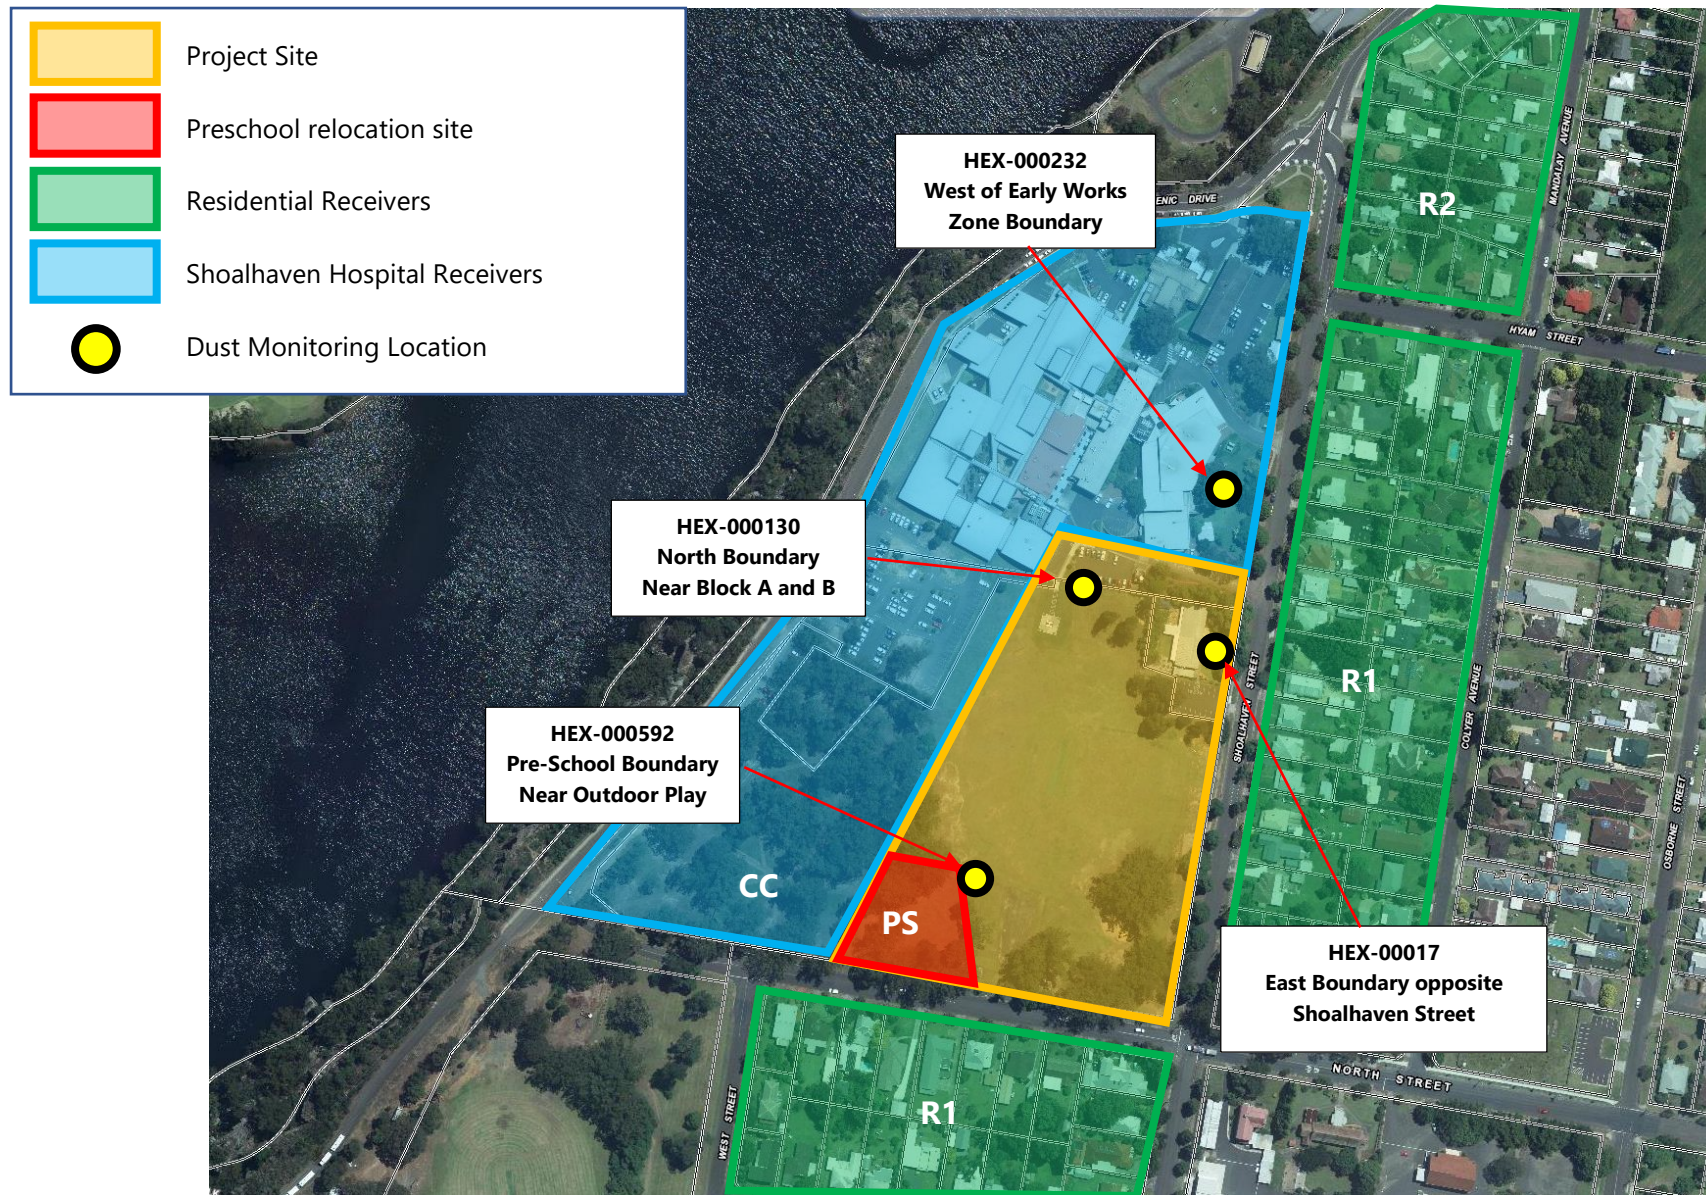

Figure 1 – Site Map. Monitoring Locations and Surrounding Receivers

3 MONITORING LOCATIONS AND DESCRIPTION

Refer to Figure 1 and photos below for monitoring locations.

**Figure 2 – HEX000171 --East Boundary Opposite Shoalhaven Street (left) and
HEX000131 – North Boundary Near Block A and B (right)**

Figure 3 – HEX000232 – West of Early Works Zone Near Block A

Figure 4 – HEX000592 – Pre-School Boundary Fence Near Outdoor Play Area

3.1 MONITORING PERIOD

This report presents the results of monitoring between 1/9/2024 and 30/9/2024.

Monitoring has been ongoing since 29th May 2023.

3.2 MONITORING EQUIPMENT

Dust monitoring was conducted using SiteHive Hexanode monitors. Monitors are programmed to continuously store noise data over every 15-minute period

4 DUST MONITORING

4.1 PROJECT DOCUMENTATION

Construction impacts to nearby development have been determined in the Construction Noise, Dust and Vibration Management Sub Plan (ref: 20230220.1/0506A/R1/VF, dated 05/06/2023)

4.1.1 Dust Management Levels

Dust monitoring is conducted to measure mechanically generated respirable PM₁₀ dust particles (< 10µm) and PM_{2.5} dust particles (< 2.5µm), which are generally understood to be the main health concern in airborne dust. The air quality limits are based on the standards outlined in Department of the Environment's *National Environment Protection (Ambient Air Quality) Measure* and NSW EPA's air quality categories.

It should be noted that the dust monitoring results can be influenced by events such as fires, fogs and dust storms, thus the PM₁₀ limit has an allowance of 5 days per year to account for the effects of these two effects. It is noted that site dust suppression systems using fine water sprays can affect the dust count of laser-based measurement systems and so too can pollen in Spring. The PM₁₀ and PM_{2.5} goals are summarised below.

Table 2 – PM₁₀ and PM_{2.5} Goals (24-Hour Average)

Pollutant	Averaging Time	Maximum Concentration
Particulate Matter PM ₁₀	24 hours	50 µg/m ³
Particulate Matter PM _{2.5}	24 hours	25 µg/m ³

The EPA has air quality categories based on particle concentration over a one-hour average. These levels may be used to control site dust emissions. Typically, a project alert trigger level is set on the 'Poor' category level. **However, the assessment level is based on the 24-hour average.**

Table 3 – PM₁₀ and PM_{2.5} Goals (1-Hour Average)

Pollutant	Air Quality Category (AQC)				
	Good	Fair	Poor	Very Poor	Extremely Poor
Particulate Matter PM ₁₀ (µg/m ³)	< 50	50-100	100-200	200-600	600 and above
Particulate Matter PM _{2.5} (µg/m ³)	< 25	25-50	50-100	100-300	300 and above

4.2 MONITORED DUST LEVELS

The following legend has been generated with reference to exceedances within the monitored dust levels as follows and applied to the tables below.

RED = CONSTRUCTION RELATED EXCEEDANCE

BLUE = EXCEEDANCES DURING WEATHER AFFECTED PERIODS

GREY = EXCEEDANCES DURING OUT OF HOURS

Where true exceedances are recorded, additional analysis has been provided in the discussion below.

4.2.1 East Boundary Facing Shoalhaven Street (Monitor HEX-000171)

The daily average PM_{2.5} and PM₁₀ concentration levels are presented below:

Table 4 – East Boundary (HEX-000171) Daily Average PM₁₀ and PM_{2.5} Concentration

Date	24hr Average PM _{2.5} and PM ₁₀ Concentration					
	PM _{2.5} Level (µg/m ³)	PM _{2.5} Limit (µg/m ³)	Compliance	PM ₁₀ Level (µg/m ³)	PM ₁₀ Limit (µg/m ³)	Compliance

4.3 DISCUSSION

4.3.1 East Boundary Opposite Shoalhaven Street Residences (HEX-000171)

- During the monitoring period, PM_{2.5} dust levels at the monitoring location were found to be within the maximum concentration permitted by Department of the Environment's *National Environment Protection (Ambient Air Quality) Measure*.
- During the monitoring period, PM₁₀ dust levels at the monitoring location were generally found to be within the maximum concentration permitted by Department of the Environment's *National Environment Protection (Ambient Air Quality) Measure*.
- Construction related exceedances of the daily average occurred on the following dates and categories:
 - 17th September - PM₁₀
 - The dust level averaged over the 24-hour period was above the recommended level on this date.
 - An analysis of the dust levels indicates that the exceedance was likely attributed to general construction activities near to the monitor.
 - We note north-westerly winds were also prevalent on this date during and outside of site hours and may have contributed to the dust exceedances.
- On all other dates, exceedances of the daily average occurred largely during weather affected periods (high winds).

4.3.2 North Boundary Near Block A and B (HEX-000130)

- During the monitoring period, PM_{2.5} dust levels at the monitoring location were found to be within the maximum concentration permitted by Department of the Environment's *National Environment Protection (Ambient Air Quality) Measure*.
- During the monitoring period, PM₁₀ dust levels at the monitoring location were found to be within the maximum concentration permitted by Department of the Environment's *National Environment Protection (Ambient Air Quality) Measure*.

4.3.3 West of Early Works Zone Near Block A (HEX-000232)

- During the monitoring period, PM_{2.5} dust levels at the monitoring location were found to be within the maximum concentration permitted by Department of the Environment's *National Environment Protection (Ambient Air Quality) Measure*.
- During the monitoring period, PM₁₀ dust levels at the monitoring location were generally found to be within the maximum concentration permitted by Department of the Environment's *National Environment Protection (Ambient Air Quality) Measure*.

4.3.4 Pre-School Boundary Near Outdoor Play Area (HEX-000592)

- During the monitoring period, PM_{2.5} dust levels at the monitoring location were found to be within the maximum concentration permitted by Department of the Environment's *National Environment Protection (Ambient Air Quality) Measure*.
- During the monitoring period, PM₁₀ dust levels at the monitoring location were generally found to be within the maximum concentration permitted by Department of the Environment's *National Environment Protection (Ambient Air Quality) Measure*.

4.4 MANAGEMENT OF DUST LEVELS

General Notes:

- It should be noted that the measured dust levels will also be affected by meteorological events outside the project site, such as heavy rain and wind, high humidity, dust storms, bush fires, high pollen count and the like.

Response to Exceedances

The response procedures adopted by JH are as follows:

- The project team is notified via SMS alert messages when hourly average dust levels are exceeded
- Methodology and works across the project site and near to the specific monitoring location are recorded.
- Where monitoring locations are confirmed to be potentially impacted by the adjacent works (i.e., where exceedance notifications are received but no works are occurring near to the monitoring location – indicating alerts are as a result of external impacts – refer general notes in Section 4.3.4), work methodology was investigated and mistor(s) are deployed.

Acoustic Logic confirms JH has implemented best practices as well as reasonable and feasible mitigation measures in response to dust exceedances over the majority of this monitoring period.

A review of works on the days that led to exceedance of dust levels should be carried out and the following additional recommendations for ongoing dust management should be implemented:

- Loose soil and/or dusty stockpiles should be covered with tarpaulin/plastic sheeting outside of working hours and during extended periods where not in use.
- Minimisation/relocation of stockpiles away from dust-sensitive receivers to minimise potential for disturbance due to prevailing winds.
- Additional dust suppression methods such as directed water sprays directly onto excavation equipment and work areas should be implemented where alternative methodology cannot be found.

5 CONCLUSION

Dust monitoring has been conducted at different locations for the Shoalhaven Hospital Redevelopment between 1/9/2024 and 30/9/2024. For this monitoring period, we note the following:

- Hexanode HEX-000171 at the East Boundary - PM_{2.5} and PM₁₀ dust levels were generally within the criteria during this monitoring period.
- Hexanode HEX-000130 at the North Boundary - PM_{2.5} and PM₁₀ dust levels were generally within the criteria during this monitoring period.
- Hexanode HEX-000232 at the West of Early Works Zone - PM_{2.5} and PM₁₀ dust levels were generally within the criteria during this monitoring period.
- Hexanode HEX-000592 at the Preschool - PM_{2.5} and PM₁₀ dust levels were generally within the criteria during this monitoring period.

On dates where exceedances have occurred, these have been documented for further review and remedial action for JH review.

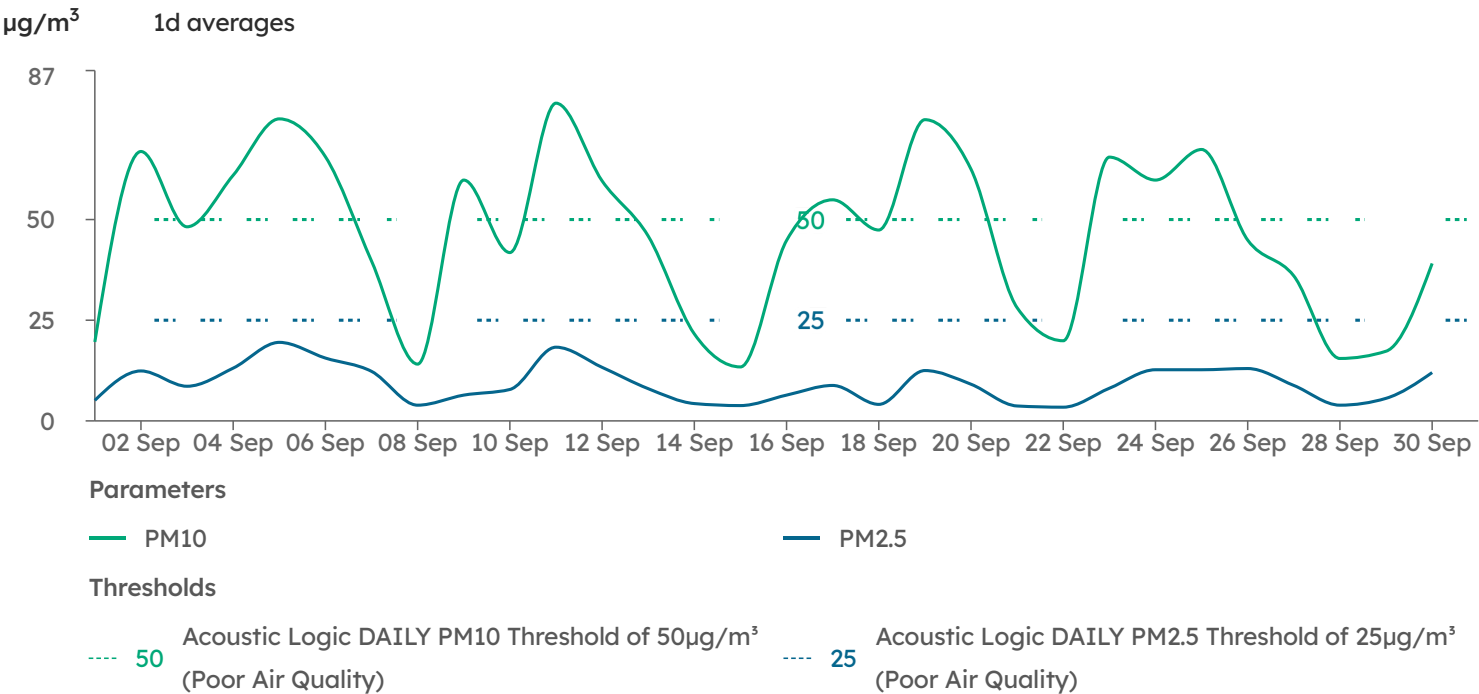

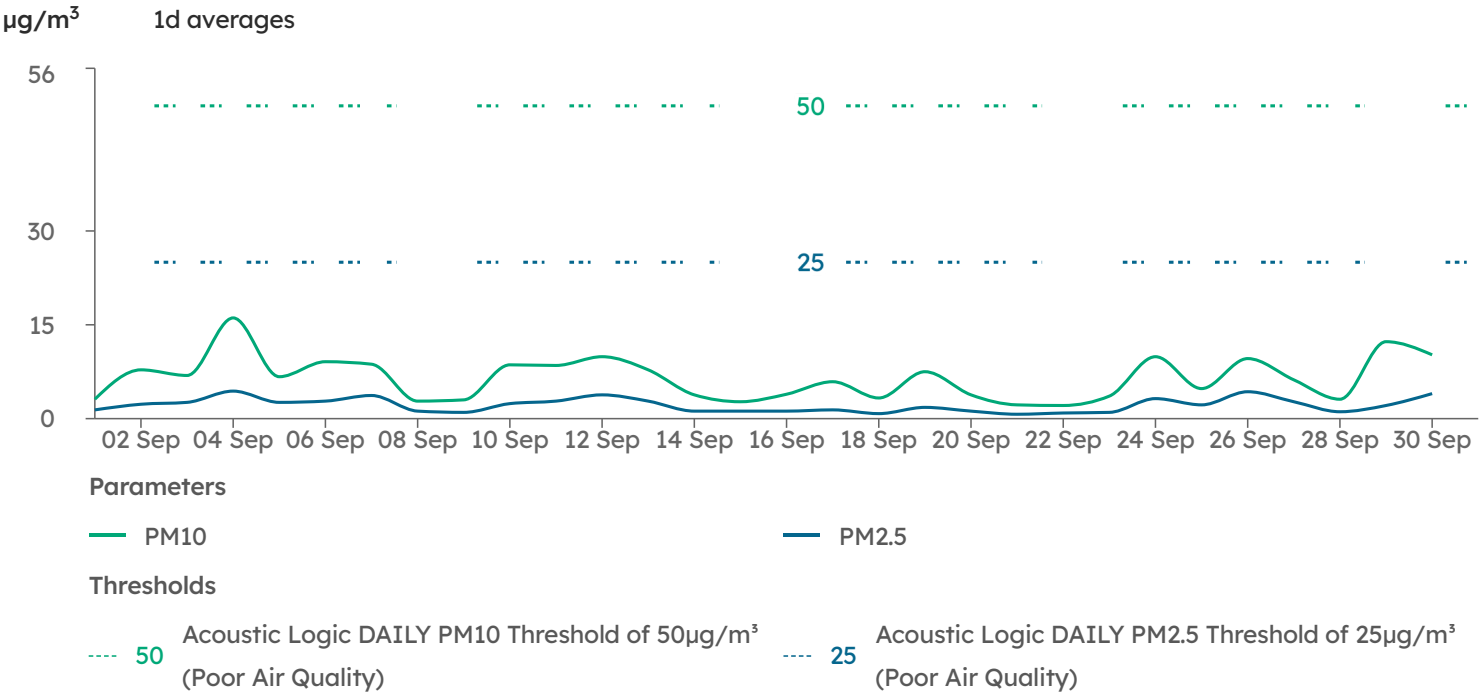

We trust this information is satisfactory. Please contact us should you have any further queries.

Yours faithfully,

A handwritten signature in black ink, consisting of a stylized, cursive 'H' followed by a long horizontal line extending to the right.
